SAIC D/SIDDOMS Doc. DS-46DA-6024  
26 May 1998

RELEASE NOTES: CHCS-4.61-DTS

This release contains changes to existing software resulting from new development.

## 1. SPECIAL CONCERNS

Site Operations Personnel: Be sure to read the CHCS Installation Guide for any software installation concerns.

## 2. DIFFERENCES FROM PREVIOUS SOFTWARE RELEASE

[[SEARCH:Ambulatory Procedure Visit (APV)  
[:K:...

### **Ambulatory Procedure Visit (APV)**

APV enhancement software has been added to CHCS. An APV, formerly known as a Same Day Surgery (SDS), is a procedure or surgical intervention with an anticipated patient stay of less than 24 hours in an Ambulatory Procedure Unit (APU). Patient arrival and check in to an APU signify the beginning of an APV encounter; patient departure and Disposition from the APU signify the termination of the APV encounter.

Diet (as well as Unit Dose Medication) ordering capability has been added to all previously available order types for APV patients.

Users in PAS and CLN subsystems initiate the order for APVs as an Ambulatory Procedure Request (APR). Once the patient arrives for the encounter (and the APV appointment is marked 'KEPT'), the APR is activated on the patient's active APV page. Diet orders can be placed on APV pages at any time the page is in a pending or active state.

Several enhancements have been made to the Abnormal Clinical

## Chemistries of Interest Report:

- When a lab test result begins with a numeric but is actually part of a textual result, the system no longer interprets this as a numeric value only on the Abnormal Clinical Chemistries of Interest Report in the TEST RESULT column. To avoid the possibility of lab results being misinterpreted, the software has been modified to interpret the results correctly. Previously, If the test result happened to begin with a numeric but was actually part of the textual result, the system was interpreting this as a numeric value only and displaying it incorrectly on the report. (SIR 27935)
- A related change is that if a lab test result is a numeric, the system now displays the lab result on the report as it does in the Lab Result File. This avoids any confusion to the user reading the report. Previously, the system reformatted the result into a whole number, with a decimal to the hundredth place. (SIR 27979)
- When a user is printing the report, the system verifies that the user has the required security key before displaying sensitive lab test results. If the user does not have the appropriate security key and is not the requesting HCP, "Requesting HCP Only" displays on the report. Previously, sensitive results could be seen by users without a security key. (SIR 27980)

[[SEARCH:Enter/Maintain Diet Orders

[:K:...

**DTS    Dietetics System Menu**  
**OF    Diet Office Menu**  
**DO    Enter/Maintain Diet Orders**

You access the DO option to enter and maintain DTS orders for an APV encounter on a current APV page.

[[SEARCH:Diet Roster

[:K:...

**DR    Diet Roster**

You access the DR option and enter the name of an APU to display/print all current and future DTS orders for a specific APU.
